

## PERMANENT MAKEUP AFTERCARE INSTRUCTIONS

### **\*EYELINER\***

-Expect light to moderate swelling, redness, tenderness, puffiness and in some cases bruising. You may gently ice the area using very light pressure on the skin. Keep the ice in a clear plastic bag so the eyeliner does not come in contact with any water.

-Apply pigment with clean fingers 3-5 times a day. You will experience slight itching as the area heals. Apply ointment until all of the scabs have come of on their own. Do not pull scabs off prematurely. (DO NOT use Neosporin!)

-Try to avoid your eyes coming into contact with water as much as possible for 5-7 days. If you feel you need to clean them use a damp Q-tip and gently swab the area. Follow with ointment.

-Apply lubricant eye drops if eyes feel dry or irritated. Do not flush the area as saline can remove pigment.

-Avoid using any makeup on the eyeliner area (no mascara!) for 5-7 days. You can use eyeshadow above the eyeliner but not ON the eyeliner to prevent infection. Do not use contacts for 5 days following your procedure.

-It is HIGHLY recommended that you use NEW mascara to avoid infection, as mascara carries bacteria.

-It's VERY important to keep the tattooed area clean as to avoid infection. If you feel the area has come in contact with anything that may compromise healing you will need to cleanse the area with a cotton pad and a small amount of Witch-hazel. Be careful not to get the Witch-hazel into the eyes.

Please do not hesitate to call if you have ANY questions or concerns.
